**Subject:** FW: NBU Well Status

Here are the number of all wells for the Chaparral North Burbank Unit CO2 project as reported by Chaparral. They have previously reported 9 wells that have purged since the project started in April 2012.

Total Wellbores 2908  
Total P&A/Dry 1911  
Total Injectors 366  
Total Producers 631

**Subject:** [SPAM] NBU Well Status

Chris, attached is a file that contains all the NBU wells, locations and status. For sorting purposes, anything that included PA, P&A or Dry is considered plugged; anything that included INJ, SWD or WAG is considered an injector, and anything that is OIL, water supply or service is considered a producer.

Please let me know if there is anything else you would like for me to provide.
